Mohith Ram Narendra Babu

Redmond, WA | mohithn@berkeley.edu | 425-588-9636 | linkedin.com/in/mohith-ram-narendra-babu

Education

University of California, Berkeley Graduation: May 2028

B.S. in Electrical Engineering & Computer Sciences *Berkeley, CA*

- **Relevant Coursework:** Structure & Interpretation of Computer Programs, Data Structures, Efficient Algorithms, Linear Algebra, Circuits, Signals & Systems, Discrete Math, Probability, Machine Structures, Machine Learning

Professional Experience

Amazon Web Services (AWS) Seattle, WA

Software Development Engineering Intern *June 2026 – August 2026*

- Cut agreement lookup time to <2s by replacing manual search with a Python Bedrock agent mapping queries to 5 APIs
- Caught 80% of regressions pre-deployment by replaying 61 labeled queries across 10 workflows with benchmark harness
- Eliminated write risk with a read-only API allowlist, rejecting non-GET calls pre-dispatch and enforcing with 22 tests
- Reduced lookup tickets 45% across 5 teams by shipping retrieval and API-orchestration workflows on Linux hosts

Maserati Berkeley, CA

Data Consultant [Contract] *February 2026 – July 2026*

- Built benchmarking model across 15+ luxury brands, identifying EV and pricing gaps to guide 5–10 year roadmap
- Analyzed 10K+ consumer reviews with NLP models, quantifying perception gaps in innovation vs. heritage positioning
- Automated dashboards tracking electrification, AI, and sustainability trends, cutting research time by 40% across teams

CKTH Berkeley, CA

Software Engineer [Contract] *February 2026 – May 2026*

- Built 5 Next.js MVP pages (Calendar, Big Ups, Wallet, Profile, Onboarding), enabling navigation for 10+ user flows
- Implemented NestJS APIs and admin CRUD endpoints for Events and Locations, supporting 1000+ records reliably
- Wrote 20+ unit tests for frontend modules and APIs, reducing regression risk and improving staging release stability

Mustang Math Seattle, WA

Software Engineer *May 2025 – August 2025*

- Led development on test problem management platform used by Stanford and Berkeley actively serving 10K+ students
- Created scalable real-time collaborative testing system with REST API, SvelteKit, and SQL used by 1.5K+ competitors
- Optimized website content and UI/UX with lazy loading, supporting growth for monthly active users to 75K+

Projects

Kalshi Mispricing Engine | *Rust, Tokio, WebSockets* August 2026

- Ingested 12K+ NFL order-book updates/sec via WebSocket using concurrent Tokio pipeline w/ lock-free async channels
- Surfaced 80+ candidate mispricings/week by comparing live prices against win probabilities and flagging $>2\sigma$ deviations
- Backtested strategy at 14.7% simulated return across 1,200 historical games, modeling transaction fees and slippage

GPT-2 Inference Engine | *C++17, Multithreading* July 2026

- Implemented GPT-2 inference in C++17, achieving 42 tok/s on CPU with zero ML-framework dependencies
- Cut per-token latency 61% using KV caching, cache-blocked GEMM kernels, and multithreaded attention across 8 cores
- Verified logits within 1e-4 of HuggingFace outputs across 100 prompts using an automated differential-testing harness

GrandFLOW: Senior Care Assistant | *Next.js, TypeScript, Supabase* November 2025

- Built a senior care platform using Next.js, TypeScript, and Supabase, integrating voice agents and health dashboards
- Implemented real-time voice interaction using Whisper STT and Fish Audio TTS, enabling natural AI conversations
- Developed health and concierge dashboards with Supabase Realtime and role-based access, syncing 10+ wellness metrics

Skills

Languages: Python, C++, Java, JavaScript, TypeScript, HTML, CSS, Dart, SQL, C#, Kotlin
Frameworks/DBs: React, Svelte, Next.js, Node.js, Firebase, Supabase, REST APIs, PostgreSQL, MongoDB
Tools: Git/GitHub, Kubernetes, Docker, Redis, Linux, Bash, AWS (Bedrock, CDK, CloudWatch), JUnit, pytest, CUDA
